

Project Goals 09/07/12

Part A

1. My project will be an urban design plan for the area affected by the proposal for the new Circle Interchange.
2. My project will be about developing the area adjacent to the Circle in order to respond better to the demands and efficiency of the new Interchange.
3. My project will be developed because the existing infrastructure around the Circle is outdated. The new Interchange will provide a more efficient means of travel both into the city and through it. Developing the area around the Circle can prove economically beneficial to both existing and future businesses along with the development of the neighborhoods as a whole.

Part B

The goal is to develop an urban design plan for the area affected by the proposed new Circle Interchange.

1. The project will solve inadequate infrastructure that may not coincide with the new proposed Circle Interchange.
2. The idea is important because the area around the Circle is currently outdated and can benefit economically from a redesign.
3. The idea is important because the area can otherwise be overlooked and under-utilized.
